Agent Orange Talking Paper #1 by Gary D. Moore

Agent Orange (In Error)

Agent Orange is the name to which all herbicides are referred (technically) in error during the Vietnam War. The name, **Agent Orange**, has become synonymous for, and collective of, all **herbicides** used during the Vietnam War. **Agent Orange**, is also the term for the harmful effects of **herbicides** (again, in error). People do not have **Agent Orange disease**, rather, a disease, or cancer caused directly or indirectly from exposure to a **herbicide** containing **dioxin**. The name, **Agent Orange**, was derived from the orange stripe on drums in which the herbicide was stored.

Agent Orange (Scientifically)

Agent Orange was one of several defoliants (herbicides) containing trace amounts of a toxic contaminant, **TCDD (dioxin)**. **Defoliants** were used during the Vietnam War to defoliate vast areas of jungle growth. The real, **Agent Orange**, was a 1:1 mixture of the n-butyl esters of 2,4-dichlorophenoxyacetic acid (2,4-D) and 2,4,5-trichlorophenoxyacetic acid (2,4,5-T). A byproduct (contaminant) of the manufacturing process for 2,4,5-T (used in all the agents during the Vietnam War) is 2,3,7,8-tetrachlorodibenzo-para-dioxin (**TCDD**). **TCDD** is commonly referred to as **dioxin**.

This chart contains a list of the herbicides (agents) used during the Vietnam War, and the amount of TCDD (dioxin) contamination present in the agents (per the USAF Herb Tapes):

Description	TCDD (Dioxin) Amounts
Agent Orange	1.77 to 40 ppm
Agent Blue (Purple)	32.8 to 45 ppm
Agent Red (Pink)	65.6 ppm
Agent White (Green)	65.6 ppm
Silvex	1 to 70 ppm
2,4,5-T (Current)	0.1 ppm or less

Vietnam and Agent Orange Facts

- Demand for military **Agent Orange** resulted in higher levels of **dioxin** contamination than in the 2,4,5-T produced for civilian applications in the U.S. As noted in the included chart.
- The U.S. Air Force military operation **Ranch Hand** began spraying Agent Orange on areas of South Vietnam in August 1965 (though it was used prior to this date).
- The US Air Force **Herb Tapes** accounted for just over 8 million gallons of the **herbicides** used in South Vietnam.
- 18 million gallons of **Agent Orange** were reported to have been used in South Vietnam.
- **Agent Orange** caused Vietnamese farmers to lose about 70% of their crops. (One of the goals for using **herbicides** was to deprive the enemy of food.)

- **6250+** square miles of South Vietnam can not be farmed because of defoliation. This is still true almost 30 years later.
- A C-123 (Provider) could dump 11,000 lbs. of Agent Orange over 300 acres in four minutes.

Brief History of Agent Orange

- In the early years of WWII, a grant was provided by the National Research Council to develop a chemical to destroy rice crops in Japan (the major food source of the Japanese). **2,4-D** and **2,4,5-T** (Agent Orange) was the result. A discussion between President Roosevelt and White House Chief of Staff, Admiral William D. Leahy determined that this *heinous* chemical should not be used. Agent Orange was not used during WWII.
- In 1961, President Kennedy signed two orders allowing Agent Orange to be used in Vietnam. One order to **destroy crops**, and another order to **defoliate the jungle**. [Note: These orders were signed prior to major U.S. intervention.]
- Agent Orange and other herbicides were used extensively through 1970 (and thereafter until the end of the Vietnam War).
- Vietnam Veterans and their families filed a class action suit against seven chemical companies (Dow Chemical, Monsanto, Uniroyal, Hercules, Diamond Shamrock, Thompson Chemical, and T.H. Agriculture). It was settled out of court in May 1984 for victims and families of those exposed to **herbicides** for \$180,000,000 (the lawyers got a staggering 100 million dollars). The amount given to qualifying families was a sham. Example: A woman whose husband suffered, and eventually died... leaving her alone with three children was given just over \$3,000.00 (you should have been there the day she told me that). Another friend (Vietnam Vet) suffered with a brain tumor along with other herbicide related diseases for over three years. He was awarded \$1,860.00... pathetic isn't it.
- Victims and families of those exposed to herbicides in Vietnam had until **January 17, 1995** to apply for compensation at: Agent Orange Veteran Payment Program, PO Box 110, Hartford, CT 06104

Terms

Half Life. The length of time required for half a quantity of drug, or other substance residing in a living organism to be metabolized, or eliminated by normal biological processes. It is also called biological half-life. The half-life of **dioxin** is **8.7** years in humans (as determined by the Ranch Hand (follow-up) studies).

PTSD, or Post Traumatic Stress Disorder (Dysfunction). A psychological condition that occurs after a trauma (stressful trauma situation, e.g., war, accident, rape, robbery, etc.). **PTSD** is characterized by anxiety, depression, guilt, sorrow (or grief), a sense of shame, death anxiety, panic, low self-esteem, rage, and/or any combination of these. Treatment varies with the severity, and willingness of the person to seek help.

Sarcoma. A malignant tumor arising from connective tissues. Soft Tissue Sarcomas are tumors in muscles, fat, fibrous tissue, and vessels serving these tissues as well as the peripheral nervous system.

TCDD Tetrachlorodibenzo-p-dioxin (also 2,3,7,8-tetrachlorodibenzo-para-dioxin), commonly known as **dioxin**. **TCDD** is in reality a family of dioxins that contain four (4) chlorine atoms each. Therefore, **TCDD** is classified as a **chlorinated** organic chemical. **TCDD (dioxin)** is, perhaps, the most detrimental and damaging chemical ever produced. It's effects will be with us for several generations.
