SELECTED BIBLIOGRAPHY OF THE
PHENOXY HERBICIDES

IV. Ecological Effects

R. W. Bovey and J. D. Diaz-Colon*

Introduction

This is the fourth publication in the series "Selected Bibliography of the Phenoxy Herbicides." Three previous bibliographies regarding fate, dioxin, and toxicology were published in 1976 and 1977.

The beneficial effects of the phenoxy herbicides, when properly used, are well established. Ecological changes and population shifts of organisms in the treated environment as a result of phenoxy herbicide use are of widespread concern. In this bibliography we have attempted to provide some of the more pertinent references relating to phenoxy herbicide use and environmental effects. Research papers related to the interactions of microorganisms and phenoxy herbicides will be provided in the next bibliography.

References are listed in alphabetical order according to senior author's name. A subject numerical index, consisting of seven sections, is provided. Each section represents a phenoxy herbicide and the ecosystem affected. Available literature on other subjects (comments, legal aspects and gubernatorial hearings) is covered under subsection "Miscellaneous."

Each Arabic numeral in the subject index identifies a reference in the alphabetical list of authors. For references published in languages other than English, the abbreviated form of the particular language is enclosed in parentheses after the title. A list of the abbreviated and complete names of languages and a list of the abbreviated and complete names of periodicals, together with their place of origin, are also provided. If English abstracts for the references are available, the abstract sources are included after the listed reference.

*Respectively, research agronomist and agricultural research technician, Agricultural Research Service, U. S. Department of Agriculture, and The Texas Agricultural Experiment Station (Department of Range Science).
